1.7. Long Multiplication and Division Review

Multiplication of large numbers is done using the distributive property of multiplication over addition. The numbers are first split into ones, tens, hundreds, etc.

$$259 \cdot 5 \;=\; (200 + 50 + 9) \cdot 5 \;=\; 200 \cdot 5 + 50 \cdot 5 + 9 \cdot 5$$

An **algorithm** known as **long multiplication** is used to simplify writing:

$$\begin{array}{rrrr} & & & 5 \\ & \times & 2 & 5 & 9 \\ \hline & & & 4 & 5 \\ & & 2 & 5 & \\ + & 1 & 0 & & \\ \hline & 1 & 2 & 9 & 5 \end{array}$$

multiply the ones $5 \cdot 9$ ones

multiply the tens $5 \cdot 5$ tens

multiply the hundreds $5 \cdot 2$ hundreds

Example 1: Multiply integers: 67 and 8.

$$\begin{array}{r} 67 \\ \times\ 8 \\ \hline 536 \end{array} \qquad \begin{array}{r} 8 \\ \times 67 \\ \hline 56 \\ 48 \\ \hline 536 \end{array}$$

Practice 1: Calculate:

$$\begin{array}{r} 65 \\ \times\ 3 \\ \hline \end{array} \quad \begin{array}{r} 24 \\ \times\ 4 \\ \hline \end{array} \quad \begin{array}{r} 19 \\ \times\ 5 \\ \hline \end{array} \quad \begin{array}{r} 36 \\ \times\ 5 \\ \hline \end{array} \quad \begin{array}{r} 18 \\ \times\ 7 \\ \hline \end{array} \quad \begin{array}{r} 23 \\ \times\ 6 \\ \hline \end{array}$$

$$\begin{array}{r} 2 \\ \times 56 \\ \hline \end{array} \quad \begin{array}{r} 4 \\ \times 12 \\ \hline \end{array} \quad \begin{array}{r} 3 \\ \times 99 \\ \hline \end{array} \quad \begin{array}{r} 3 \\ \times 45 \\ \hline \end{array} \quad \begin{array}{r} 3 \\ \times 61 \\ \hline \end{array} \quad \begin{array}{r} 4 \\ \times 82 \\ \hline \end{array}$$

Example 2: Multiply 619 and 7 using long multiplication.

$$\begin{array}{rrrr} & 6 & 1 & 9 \\ \times & & & 7 \\ \hline 4 & 3 & {}^{1}3 & {}^{6}3 \end{array}$$

multiply the ones $619 \cdot 7$ ones

Start by multiplying ones $9 \cdot 7 = 63$. Write ones (3) at ones spot, and carry the 6.

Multiply tens and add the 6 that was carried over $1 \cdot 7 + 6 = 7 + 6 = 13$. Write tens (3) at the tens spot and carry the 1.

Multiply hundreds and add the 1 that was carried over $6 \cdot 7 + 1 = 42 + 1 = 43$. Write hundreds (3) at the hundreds spot and carry the 4.

There are no thousands in this problem, so just use the 4 that was carried over to the thousand column.

Practice 2: Calculate:

$$\begin{array}{r} 215 \\ \times \quad 2 \\ \hline \end{array} \qquad \begin{array}{r} 216 \\ \times \quad 2 \\ \hline \end{array} \qquad \begin{array}{r} 370 \\ \times \quad 3 \\ \hline \end{array} \qquad \begin{array}{r} 308 \\ \times \quad 3 \\ \hline \end{array} \qquad \begin{array}{r} 450 \\ \times \quad 5 \\ \hline \end{array}$$

$$\begin{array}{r} 601 \\ \times \quad 9 \\ \hline \end{array} \qquad \begin{array}{r} 430 \\ \times \quad 8 \\ \hline \end{array} \qquad \begin{array}{r} 304 \\ \times \quad 5 \\ \hline \end{array} \qquad \begin{array}{r} 504 \\ \times \quad 3 \\ \hline \end{array} \qquad \begin{array}{r} 901 \\ \times \quad 9 \\ \hline \end{array}$$

Example 3: Multiply 342 and 37 using long multiplication.

$$\begin{array}{rrrrr} & & 3 & 4 & 2 \\ & \times & & 3 & 7 \\ \hline & & 2 & 3 & 9 & 4 \\ + & 1 & 0 & 2 & 6 & \\ \hline & 1 & 2 & 6 & 5 & 4 \end{array}$$

multiply with ones $342 \cdot 7$ ones

multiply with tens $342 \cdot 3$ tens

Start by multiplying the first factor, 342, by the ones digit of the second factor, 7, and write the result underneath the line:

$$342 \cdot 7 \;=\; (2 + 40 + 300) \cdot 7 \;=\; 14 + 280 + 2100 \;=\; 2394$$

Multiply 342 by the number of tens of the second factor, 3. Write the result aligned with the tens column.

$$342 \cdot 3 \;=\; (2 + 40 + 300) \cdot 3 \;=\; 6 + 120 + 900 \;=\; 1026$$

Finally add the two rows in order to get the final result of 12654.

Practice 3: Multiply.

$$\begin{array}{r} 164 \\ \times\ 12 \\ \hline \end{array} \qquad \begin{array}{r} 235 \\ \times\ 15 \\ \hline \end{array} \qquad \begin{array}{r} 705 \\ \times\ 35 \\ \hline \end{array}$$

$$\begin{array}{r} 214 \\ \times\ 13 \\ \hline \end{array} \qquad \begin{array}{r} 221 \\ \times\ 64 \\ \hline \end{array} \qquad \begin{array}{r} 453 \\ \times\ 23 \\ \hline \end{array}$$

Example 4: Divide $124 \div 4$ using long division.

$$\begin{array}{r} 31 \\ 4\overline{)124} \\ \underline{12} \\ 04 \\ \underline{4} \\ 0 \end{array}$$

Example 5: Divide $175 \div 7$ using long division.

$$\begin{array}{r} 25 \\ 7\overline{)175} \\ \underline{14} \\ 35 \\ \underline{35} \\ 0 \end{array}$$

Practice 4: Divide the following integers. Use long division.

a) $328 \div 8 =$

b) $295 \div 5 =$

c) $426 \div 6 =$

d) $576 \div 8 =$
